Consecutive No, Short Title R&S to sell mojoRTK – April 10, 2008

Riesterer & Schnell joins network of mojoRTK resellers

Englewood, Colo. – Riesterer & Schnell, Inc. recently announced they will offer the new **No Drift™** mojoRTK Auto-steer by Leica Geosystems, becoming the first reseller in Wisconsin to carry the new auto-steer system and offer exclusive upgrades.

The new mojoRTK is the first auto-steer system that allows farmers to buy a basic system and then add only the features they need, creating a completely customized system at an affordable price.

“We are proud to welcome Riesterer & Schnell to our team of premium resellers,” said Darin Sothers, National Sales Manager for Leica Geosystems Ag Group. “In addition to the basic system, Riesterer & Schnell will offer customized upgrades, including the addition of GLONASS satellites, 8- and 16-mile range upgrades, survey grade elevation and other add-ons for the mojoRTK.”

In addition to carrying the mojoRTK, Riesterer & Schnell will be pioneers in virtual service and support with Virtual Wrench™ – the agriculture industry’s first real-time, virtual service, support and diagnostic tool. With the use of Virtual Wrench, Riesterer & Schnell technicians will have the ability to support the mojoRTK system in the field with remote technicians. With one touch of a button, farmers can connect to technicians who can view and adjust settings in the cab. They can see exactly what the farmer is viewing, and even “push” the buttons to make adjustments remotely.

“The mojoRTK system is compatible with third-party auto-steer kits, meeting the diverse needs of many of our customers.” said Doug Wallander, sales representative at Riesterer & Schnell. “With eight locations across the state of Wisconsin, it is important to us to offer easy-to-use products at competitive prices. The mojoRTK meets these standards.”

Leica has capitalized on its 180-year history in the survey, construction and mining industries to provide innovative new technologies like the mojoRTK Auto-steer platform, which fits neatly in the radio slot of the tractor, and Virtual Wrench™ a revolutionary support and diagnostic system that allows technicians to remotely service ag electronics in real time.

Contact your local Riesterer & Schnell sales representative for more details and pricing for the mojoRTK Auto-steer platform, upgrades and Virtual Wrench service options.

###

Leica Geosystems – when it has to be right

Leica Geosystems' agriculture applications build on the company's experience in its growing GPS and machine automation business, which already benefits the survey, construction and mining industries worldwide. The Denver, Colo., agriculture product sales and management facility is managed by auto-steer company veterans with a proven commitment to innovation based on solid economic returns for farmers.

Those who use Leica Geosystems products every day trust them for their dependability, the value they deliver, and the superior customer support. Based in Heerbrugg, Switzerland, Leica Geosystems is a global company with tens of thousands of customers supported by more than 3'500 employees in 28 countries and hundreds of partners located in more than 120 countries around the world. Leica Geosystems is part of the Hexagon Group, Sweden.
